TOTAL ACRES		102.3	Total size (in acres) of all ponds combined								
AVG. TREATED ACRES		20.5	Average treated pond area is roughly 20%								
Additional Notes: Ponds are very high now due to all the rain we have been receiving. I have been keeping the weeds and algae down very well between the rain and have sprayed most of the ponds once this month. I have been picking a lot of trash out of them as the drains are being flushed out with all the rain we are getting. All of the ponds are looking very healthy and are very high now. I am very pleased with their appearance and with the results I have been getting out of the treatments which have been applied.
